Extra Vision

Mommy and Daddy Puffin are finding it difficult to see Little Puffling on Skellig Michael. They know he is close by, but they can not see him with their eyes alone. Can you design and make a set of binoculars, or an other apparatus that might help them to see Little Puffling a bit better?

Can you hear me Little Puffling?

Skellig Michael is a vast island, and the Puffins often find it difficult to hear each other. They would love to be able to call each other, especially at times when Little Puffling is gone exploring. Can you design and make a loudspeaker for the puffins that will help them call Little Puffling to come home? How can you test your loudspeaker?
