

# Activity 1: Design and Make Hopscotch

## Measures

- What size will our hopscotch be? What is the area of each box?
- How heavy should our throwing object be? What will happen if it is too light?

## Materials

- What is the best material to use for making our throwing object?
- Do we want it to bounce? Roll? Is it a safe object to use?

## Shape and Space

- What other shapes could we use to design our own hopscotch game?
- Can we put shapes inside each of the boxes instead of numbers?

## Inclusion

- Can we make a sensory version of hopscotch?
- Each square can be made of different materials such as bubble wrap, cloth, carpet, sand paper etc for a sensory experience.

## Skills

- Predicting
- Investigating
- Measuring
