

Crop Sowing Rates

Crop	Commercial seeding rate in Kilograms/ Hectare
	Potatoes are sown at a rate of 2500Kg/ Hectare
	Barley is sown at a rate of 125-140Kg/ Hectare Thousand grain weight (mass of 1000 grains of cereal variety in grams) is used to calculate seeding rate
	Kale is sown at a rate of 4-5Kg/ Hectare
	Peas are sown at a rate of 30Kg/ Hectare
	Oil Seed Rape is sown at a rate of 3-4Kg/ Hectare

$$\text{Seed rate (kg/ha)} = \frac{\text{Target Population} \times \text{TGW}}{\text{Expected Establishment (\%)}}$$

There is 10,000 sq metres in 1 hectare

Can you work out the seeding rate per metre for these crops for my polytunnel?
