Measures of Central Tendency

```python
# A simple program to calculate and display averages
from statistics import *

# Initialise a list of values
values = [2,3,5,2,4]

# Compute the 3 averages
arithmetic_mean = mean(values)
median_value = median(values)
modal_value = mode(values)

# Display the answers
print("The mean is ", arithmetic_mean)
print("The median and mode are %d and %d" %(median_value, modal_value))
```

When the program is run the output looks like this:

```
The mean is  3.2
The median and mode are 3 and 2
>>>
```

Measures of Central Tendency

Oide

Averages and measures of central location

These functions calculate an average or typical value from a population or sample.

mean()	Arithmetic mean ("average") of data.
fmean()	Fast, floating point arithmetic mean.
geometric_mean()	Geometric mean of data.
harmonic_mean()	Harmonic mean of data.
median()	Median (middle value) of data.
median_low()	Low median of data.
median_high()	High median of data.
median_grouped()	Median, or 50th percentile, of grouped data.
mode()	Single mode (most common value) of discrete or nominal data.
multimode()	List of modes (most common values) of discrete or nomimal data.
quantiles()	Divide data into intervals with equal probability.

https://docs.python.org/3/library/statistics.html
Demonstration of matplotlib

```python
# A simple program to demonstrate use of matplotlib
from matplotlib import pyplot as plt

# Initialise a list of values
values = [2,3,5,2,4]

# Intervals for the x-axis
x_axis = [0, 1, 2, 3, 4]

plt.plot(x_axis, values, color='blue', linestyle='solid', marker='o')

plt.title("Demo") # graph title
plt.ylabel("Values") # label the y-axis
plt.show() # Display the plot
```

Demonstration of matplotlib

```python
# A simple program to demonstrate use of matplotlib
from matplotlib import pyplot as plt

# Initialise a list of subjects
subjects = ['Irish', 'English', 'Maths', 'LCCS', 'Ag. Sc.']

percentages = [60, 72, 68, 83, 76] # Average percentages

# Plot a bar chart
plt.bar(subjects, percentages)

plt.title("Bar Chart Demo") # graph title
plt.ylabel("Average Percentages") # label the y-axis
# put the names of the subjects on the x-axis
plt.xticks(range(len(subjects)), subjects, rotation=45)

plt.show() # Display the plot
```
Text Analysis – word frequency

```python
# A program to visualise the most common words in a file
from matplotlib import pyplot as plt
from collections import Counter

# IMPORTANT: Make sure book.txt exists in runtime directory
bookFile = open("book.txt","r") # Open the file
text = bookFile.read() # read the file
bookFile.close() # close the file
text_list = text.split() # create a list

# use counter to return the most common words
# format is .... [('the', 1507), ('and', 714), etc
most_common_words = Counter(text_list).most_common(10)

words = [] # an empty list of words
word_count = [] # an empty list of counts

# Build up the lists
for word, count in most_common_words:
    words.append(word) # append the word to the words list
    word_count.append(count)

# Now create and display the chart ....
```
Text Analysis – word frequency

… continued from previous slide

```
# Now create and display the chart ….

# Create the chart
plt.bar(words, word_count)
plt.title("Word Count Demo") # graph title
plt.ylabel("Frequency") # label the y-axis
# put the words on the x-axis
plt.xticks(range(len(words)), words, rotation=45)
plt.show() # display the chart
```

Regular Expressions

A language that enables us to look for patterns in strings

```python
import re

text1 = "THERE are 99 RED balloons"
print(re.sub('[0-9]', '', text1)) # remove digits
print(re.sub('[A-Z]', '', text1)) # remove uppercase
print(re.sub('[A-Z0-9]', '', text1)) # remove uppercase and digits
print(re.sub('[^a-z]', '', text1)) # leave lowercase
print(re.sub('[^a-zA-Z ]', '', text1)) # leave letters and spaces
print(re.sub('[^a-zA-Z0-9]', ' ', text1)) # leave letters and digits
print(re.sub(r'\b\w{1,4}\b', '', text1)) # remove words of length 1-3

text1 = "$%**$%joe*&$%^&"
print(re.sub('[^a-zA-Z0-9]', '', text1))
```

Output

THERE are RED balloons
 are 99 balloons
 are balloons
areballoons
THERE are RED balloons
THERE are 99 RED
balloons
THERE balloons

Text Analysis – word frequency

Eliminate words of three letters or less … use Regular Expressions

```python
# A program to visualise the most common words in a file
from matplotlib import pyplot as plt
from collections import Counter
import re

# IMPORTANT: Make sure book.txt exists in runtime directory
bookFile = open("book.txt","r") # Open the file
text = bookFile.read() # read the file
bookFile.close() # close the file

text = re.sub('[^a-zA-Z0-9 \n]', ' ', text)
text = re.sub(r'\b\w{1,4}\b', '', text)

text_list = text.split() # create a list

# Continue as before …
```
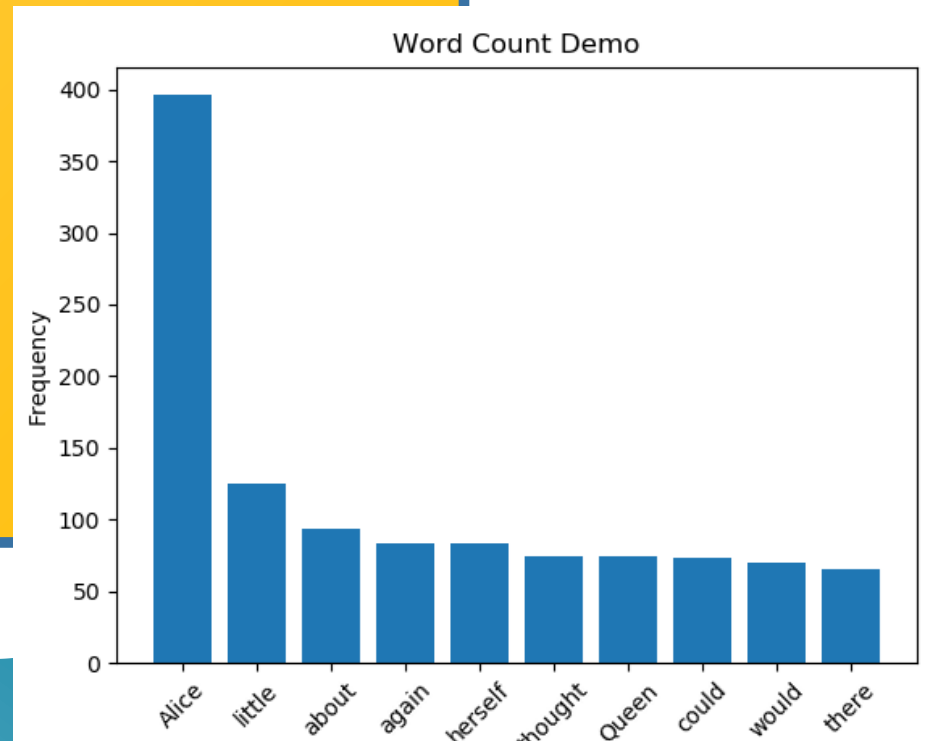

Import the `re` library

Use the `sub` method

What do you think is the most common word in Alice in Wonderland (longer than 3 letters)?

Word Count Demo

Pandas

Useful for very large files … this file was sourced on Kaggle

short_name	age	dob	height_cm	weight_kg	nationalit	club_nam	value_eur	wage_eur	player_po	preferred
L. Messi	33	24/06/1987	170	72	Argentina	FC Barcelc	67500000	560000	RW, ST, CF	Left

A. Phelan	19	20/06/2001	176	72	Republic c	Waterforc	40000	500	CM	Right
J. Akintunde	24	29/03/1996	175	75	England	Derry City	40000	550	ST	Right

Let's explore the player's value

Pandas

Oide

```python
# Using pandas - recommended for larger files
import statistics
import pandas

# Read the entire CSV file into a pandas DataFrame
df = pandas.read_csv('FIFA21-player-list.csv')

# Filter out the column, value_eur
player_values = df['value_eur']

# Compute and display the mean
mean_value = round(statistics.mean(player_values), 2)
print("Mean Value:", mean_value)

# Compute and display the median
median_value = statistics.median(player_values)
print("Median Value:", median_value)

# Compute and display the min and max values
print("Min: €%f, Max: €%f" %(min(player_values),max(player_values)))
```

Output looks like this:

```
Mean Value: 2224813.29
Median Value: 650000.0
Min: €0.000000, Max: €105500000.000000
```

COMPUTER SCIENCE

Curriculum planning

*'Learning outcomes can best be defined as statements of what a learner **knows, understands** and is **able to do** after completion of learning.'*

Curriculum planning

What will you do with LOs?

In what order should you teach them?

What about repeating LOs / linking to the other strands?

How will students demonstrate they have achieved the LOs?

What content or resources do you need?

Key message to remember:

Explore and teach the LOs through the lens of ALTs.

There are several ways to achieve this

Group Activity

Develop a curriculum plan for January to April

Focus on ALT2

Group activity - instructions

Discuss your next steps in relation to curriculum planning.

Focus on ALT 2. Remember to teach the LOs through the lens of the ALTs - there are numerous ways to achieve this.

Consider topics, LOs, build up to ALT2, ALT2, equipment, resources, assessment, differentiation, etc.

What will you do with the LOs for ALT2?

In what order should you teach them?

**What about repeating LOs / linking to the other strands?**

How will students demonstrate they have achieved the learning outcomes?

What content or resources will you need?

What can you include for Ordinary Level students?

Are there any considerations you should make for your students with SEN?

What about differentiation and extension of tasks?

Key Skills of Senior Cycle

LCCS Specification: p12

Group activity - instructions

Discuss your next steps in relation to curriculum planning.

Focus on ALT 2. Remember to teach the LOs through the lens of the ALTs - there are numerous ways to achieve this.

Consider topics, LOs, build up to ALT2, ALT2, equipment, resources, assessment, differentiation, etc.
